

WFP's SAFE Programme Safe Access To Fuel and Energy

Daphné Carliez

Clean Cooking Forum 2015
Accra, Ghana | November 10–13

www.cleancooking2015.org

WFP's SAFE focus:

- 🌀 **Saving lives** to ensure food can be cooked to meet nutritional needs in emergencies
- 🌀 Reducing **protection** and **health risks** for women and children cooking food in unsafe settings
- 🌀 Mitigating **environmental** degradation to reduce climate change and food insecurity
- 🌀 Restoring and rebuilding lives and **livelihoods** in post-conflict, post-disaster & transition settings.

Access to energy
is directly linked to food security

 **How is the SAFE initiative relevant to WFP's work and mandate?**

Food needs to be cooked.....

As the world's largest humanitarian agency fighting hunger worldwide, WFP has a duty to make sure its assistance is as nutritious as possible and conducted with safety and dignity. This includes making sure food can be cooked.

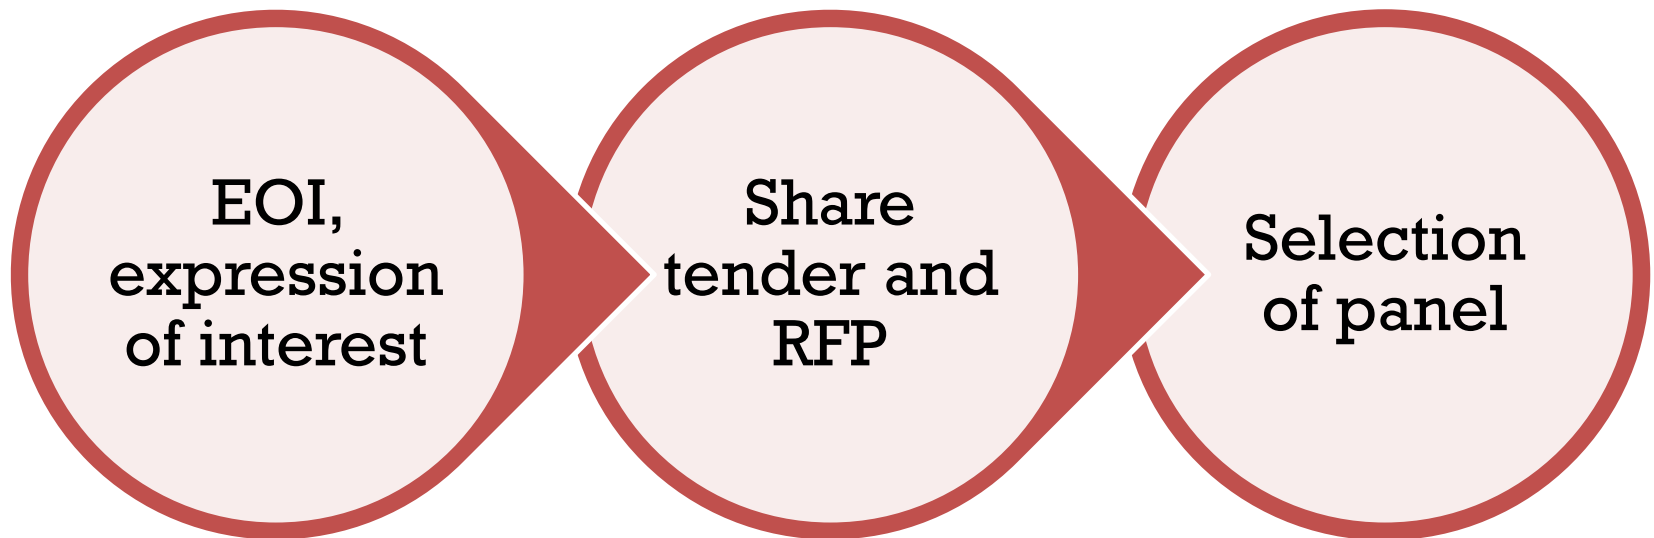

WFP's SAFE

7 STEPS OF STOVE SELECTION

- 1. Usability:** consider cooking habit, food type, and cooking practices, indoor cooking and outdoor cooking;
- 2. Fuel type:** consider what is available, do not add extra pressure on the available limited resources;
- 3. Economics:** costs of the stove investment / cost per capita;
- 4. Social Economic status of the household:**
categorize the population and needs for cooking
- 5. Technology:** different geographic locations needs different suitable technology;
- 6. Scalability:** in areas where populations are scattered it will be hard to monitor and provide support, identify what type of stove can be assembled in that area;
- 7. Acceptability:** identify the level of acceptance within the community to actual use that particular technology by interviewing communities and testing on a small scale.
